

CareConnect

Smart Donation & Volunteer Management System

Group 3: Jenisha Karmacharya, Ocean Pandey, Shreya Maharjan

Under Supervision of Sanju Shrestha

1. Introduction
2. Problem Statement
3. Challenges
4. Literature Review
5. Objectives
6. Methodology
7. Feasibility Study
8. Features
9. Gantt Chart and Task Division
10. Tech Stack
11. Comparison with Existing Systems
12. Conclusion

- Rising need for organized charity and volunteering systems
- Many people want to help but lack proper platforms
- NGOs struggle with managing donations and volunteers
- Increasing internet access has made digital charity platforms more practical and scalable
- People prefer quick, transparent, and reliable ways to contribute to social causes
- Technology can bridge the gap between donors, volunteers, and those in need

- Charitable organizations like orphanages and old age homes face difficulty in managing donations and coordinating volunteers which leads to
 - i) Miscommunication
 - ii) underutilized resources and
 - iii) reduced social impact.
- CareConnect aims to create an integrated system that connects all stakeholders for efficient donation and volunteer management.

1. Ensuring secure and reliable donation transactions
2. Maintaining transparency and trust in the system
3. Managing real-time updates of needs and contributions
4. Handling multiple user roles (Admin, Donor, Volunteer, Organization)
5. Designing an easy-to-use and accessible interface
6. Keeping users engaged and active on the platform
7. Protecting user data and preventing misuse

1. Platforms like:
 - a) **GoFundMe** focus on fundraising
 - b) **VolunteerMatch** connects volunteers but lacks donation features
 - c) **Salesforce Nonprofit Cloud** offers integrated tools but is costly and complex
 - d) **Charity Navigator** evaluates NGOs based on transparency, accountability, and financial health
2. Gap: No simple, affordable system combining donation and volunteer management

1. Develop an integrated donation and volunteer system
2. Ensure transparency and trust
3. Provide easy registration for donors and volunteers
4. Enable real-time tracking of activities
5. Enable donors to contribute easily and securely

1. Requirement Analysis

- Gather needs from donors, volunteer, and organizations

2. System Design

- UML diagrams and database design

3. Maintenance

- Regular updates, security patches and features enhancements

4. Testing

- Perform unit, integration and user acceptance testing

1. Technical Feasibility

- Uses common technologies: HTML, JS, database, CSS
- Hosting platforms are accessible

2. Economic Feasibility

- Low development cost
- Open-source tools can be used

3. Operational Feasibility

- Easy-to-use interface for all users and minimal training required
- Practical and useful in real-life scenarios

1. User Registration and Role Management (Donor, Volunteer, Admin)
2. Donation Management (Money and Item Donations)
3. Volunteer Registration
4. Organizations dashboard
5. Event Management (Create, Join, Track)
6. Transparent Donation Records and Reports
7. Dashboard and Analytics (Donor and Admin Insights)
8. Communication and Notification
9. Secure Authentication and Data Protection

Gantt Chart

Task	Week 3	Week 4–6	Week 7–9	Week 10	Week 12	Week 14
Proposal Preparation & Defense						
System Design & Requirement Analysis						
Backend Development						
Frontend Development						

Gantt Chart

Task / Activity	Week 3	Week 4–6	Week 7–9	Week 10	Week 12	Week 14
Database Integration						
Mid-Term Report & Presentation						
System Testing & Improvements						
End-Term Defense Preparation						

Gantt Chart

Task / Activity	Week 3	Week 4–6	Week 7–9	Week 10	Week 12	Week 14
Final Presentation & Demo						

Ocean:

- Develop UI using HTML, CSS, JavaScript, React.js
- Work on form design and user interface consistency
- Assist in connecting frontend with backend APIs
- Participate in testing and bug fixing

Shreya:

- Develop backend using Node.js and Express.js
- Create and manage APIs
- Support frontend integration with APIs
- Assist in database structure and testing

Jenisha:

- Design and manage MySQL database
- Test system functionalities using Postman
- Support frontend and backend integration
- Handle debugging and system validation

Common Work

- Requirement discussion and system design
- Collaborative coding and integration
- Version control using GitHub
- Project tracking using Jira
- Final testing, documentation, and presentation preparation

1. Frontend

- HTML, CSS, JavaScript
- React.js: for dynamic and responsive UI

2. Backend

- Node.js
- Express.js: framework for handling server-side logic and APIs

3. Database

- MySQL: for storing user, donation, and volunteer data

4. Tools & Testing

- Jira: task management and progress tracking
- Postman: API testing and backend validation
- GitHub: version control and collaboration

Comparison

Aspect	Existing System	Our System (CareConnect)
Donation Management	GoFundMe provides online fundraising only	Integrated donation management with tracking and transparency
Volunteer Management	VolunteerMatch focuses only on volunteer matching	Combined volunteer registration, scheduling, and participation tracking
NGO Management	Salesforce Nonprofit Cloud offers advanced CRM features	Simple and accessible management for small and local organizations
Transparency & Trust	Charity Navigator provides evaluation reports only	Real-time updates and transparent donation, volunteer records
System Type	Separate specialized platforms	Unified all-in-one platform
Usability	Moderate to complex interfaces	Simple, user-friendly interface designed for all users

- CareConnect provides an integrated platform for donation and volunteer management.
- It reduces manual work and increases efficiency for organizations.
- It helps solve real-world social coordination problems using web technology.
- It has future scope for mobile app and real-time updates.

Thank You!!
